IMPLEMENT CARRIERS

The Mammut tool carrier is the perfect link between the raw power of high-horsepower crawler tractors and the precision of modern agricultural machinery. Designed for machines without a three-point hitch, it transforms mounted implements into towed ones, allowing these 'giants of the earth' to be used to their full potential on any type of terrain.

Key Features and Operational Benefits

· Total Traction and Working Force: The frame is engineered to prevent slippage and getting stuck in the mud, ensuring that all of the tractor's power is converted into consistent traction, even in the most challenging and difficult soil conditions.

· Seedbed Precision: Thanks to impeccable load management, the coupled implement maintains an optimal and consistent working depth, ensuring uniform and seamless soil preparation.

· Energy Efficiency: Thanks to its optimised design, the required traction effort is drastically reduced, resulting in significantly lower fuel consumption and reduced wear on the tractor's mechanical components.

· Intelligent Balancing: The structure transfers the weight directly to the wheel axle during transport, thereby improving overall stability and protecting the tractor's mechanical components.

· Ultra-Robust Construction: The Mammut is designed to withstand extreme stresses, ensuring superior durability season after season. It is manufactured using the high-strength steels typical of Di Raimondo's production.

· Universal Versatility: It solves compatibility issues, allowing modern three-point implements to be used on heavy or older crawler tractors. This makes it a sound investment for modern farms.

Technical Data

Model	**Weight**	**Capacity**
	KG	KG
MAMMUT-15	740	1500
MAMMUT-20	960	2000
MAMMUT-25	1400	2500
MAMMUT-40	2800	4000
